### Ready Mixed Concrete Supplier

Carew Concrete

### Project Description

Parking lot addition  
Ready mixed concrete volume: 500 cy  
Concrete paving thickness: 5"  
Completion Date: November 2016

### Project Details

Excel Engineering is a large, full service SE Wisconsin civil engineering and architectural consulting firm, designing projects both locally and nationally.

When it came time for an addition to its existing corporate HQ asphalt parking lot, Excel's engineering team decided concrete paving made the most sense, both economically and technically.

"We've been intrigued with the engineering and financial aspects of concrete paving for a number of years now," says Jeff Quast, the firm's President.

"We often suggest our commercial and industrial building clients consider concrete parking lots for their longevity and reasonable first cost," states Quast.

"It just made sense to put our money where our mouth is and use concrete pavement for our own parking lot expansion. It has worked really well for us."
