

CONCRETE PARKING LOT

Project Arrow - Oak Creek, WI

Case Study #4 – January/February 2020

Owner

Hillwood Development Co.

Ready Mixed Concrete Supplier

Point Ready Mix

Project Description

Warehouse parking lot

Paving ready mixed concrete volume – 19,750 cy

Concrete paving thickness – ranged from 6" - 10"

Completion Date – November 2019

Project Details

Project Arrow is a large distribution facility located in Oak Creek, WI. Included in its scope is a 4-story warehouse and approximately 900,000 s.f. of 4,000 psi exterior paving mix concrete. The paving was completed in just over 6 months.

With heavy truck traffic, ready mixed concrete was the obvious choice for this heavy-duty paving application. In addition to being durable and non-rutting, concrete's lighter color and corresponding high reflectance requires less lighting.

Maintenance costs for concrete are very low. There is no need for regular resurfacing, translating to no interruptions to business.
