Commercial school bus parking lot
Ready mixed concrete: **2,000 c.y.**
Concrete paving area: **175,000+ s.f.**
Concrete paving thickness: **5"**
Completion Date: **Fall 2018**

Project Details

Joe Teglia, owner of Site Solutions LLC, was looking for a parking lot solution for his client, Go-Riteway Transportation. The company was building a large school bus storage facility to serve the greater La Crosse area school districts.

“We looked at concrete and asphalt. We were surprised that a cost comparison of structurally-equivalent concrete and asphalt paving sections showed concrete paving was actually less expensive up front,” explains Teglia. “The concrete paving was a no-brainer.”

Along with concrete’s lower first cost, this facility will also benefit from concrete paving’s well-documented longevity and relatively low maintenance costs.
